PROTOTYPE. NOT THE LIVE PRODUCT.

Forus provider onboarding, reimagined

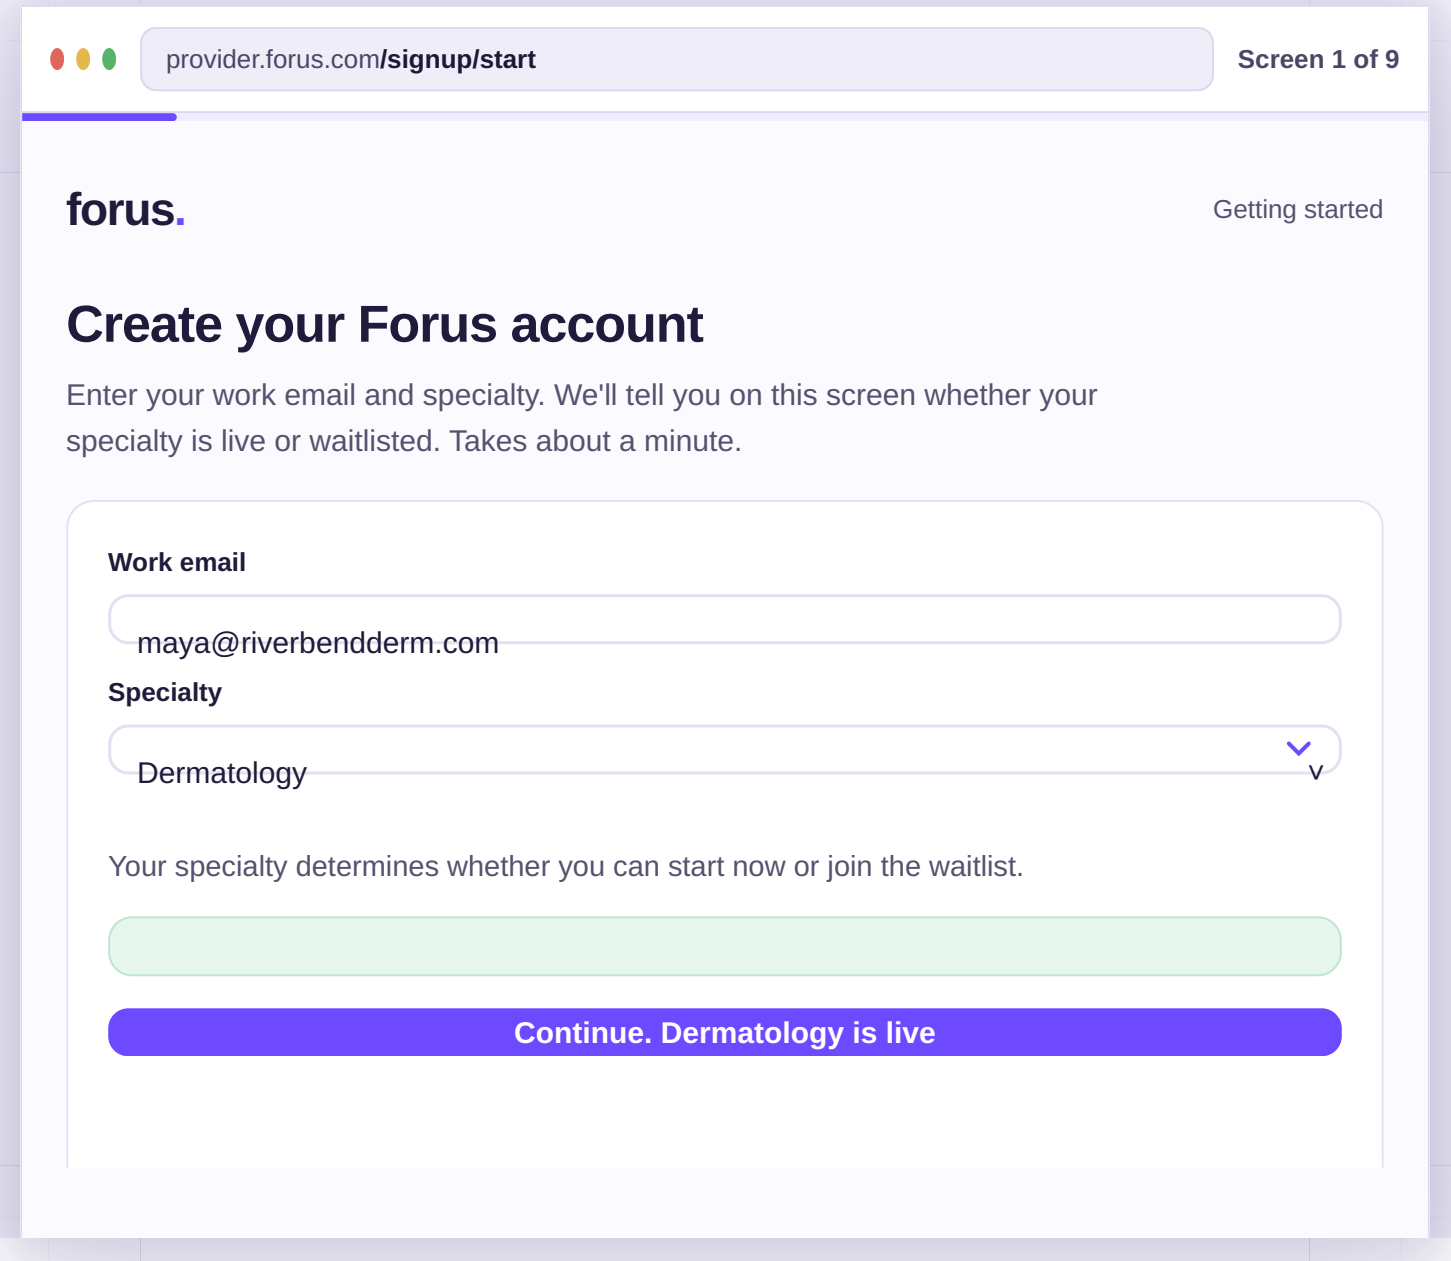

Nine screens, **sign-up to first prescription**. The waitlist, verification, referral, and team invite all happen inside the product. Each screen shows the practice's current state and names one next step.

Concept mockup — illustrative data. Practice names, cases, volumes, performance figures, statuses, and service guarantees on these screens are illustrative examples, not live data.

→ **Click through as a new practice.** Dermatology. Riverbend Dermatology Associates

→ Use **Back / Continue**, the step pills, or the ← → keys

→ Try the branches: pick **Ophthalmology** on screen 1. Search a name that **is not in NPPES** on screen 4

✓ Free for providers and patients ✓ HIPAA compliant · BAA included ✓ SOC 2 Type II

✓ We never share your email

Already have an account? **Log in** · Joining a practice already on Forus? **Request to join**

OBSERVATION

In the live flow, specialty determines the path, but that isn't clear until after sign-up — waitlisted practices learn by email. Sign-up is also one long form with no progress indicator.

PROPOSED CHANGE

Show the branch on the first screen, group specialties by live vs. opening next, and split sign-up into short screens with a progress indicator.

HOW I'D MEASURE IT

Sign-up completion by specialty, and waitlist join rate for specialties that aren't live.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

Forus provider onboarding, reimagined

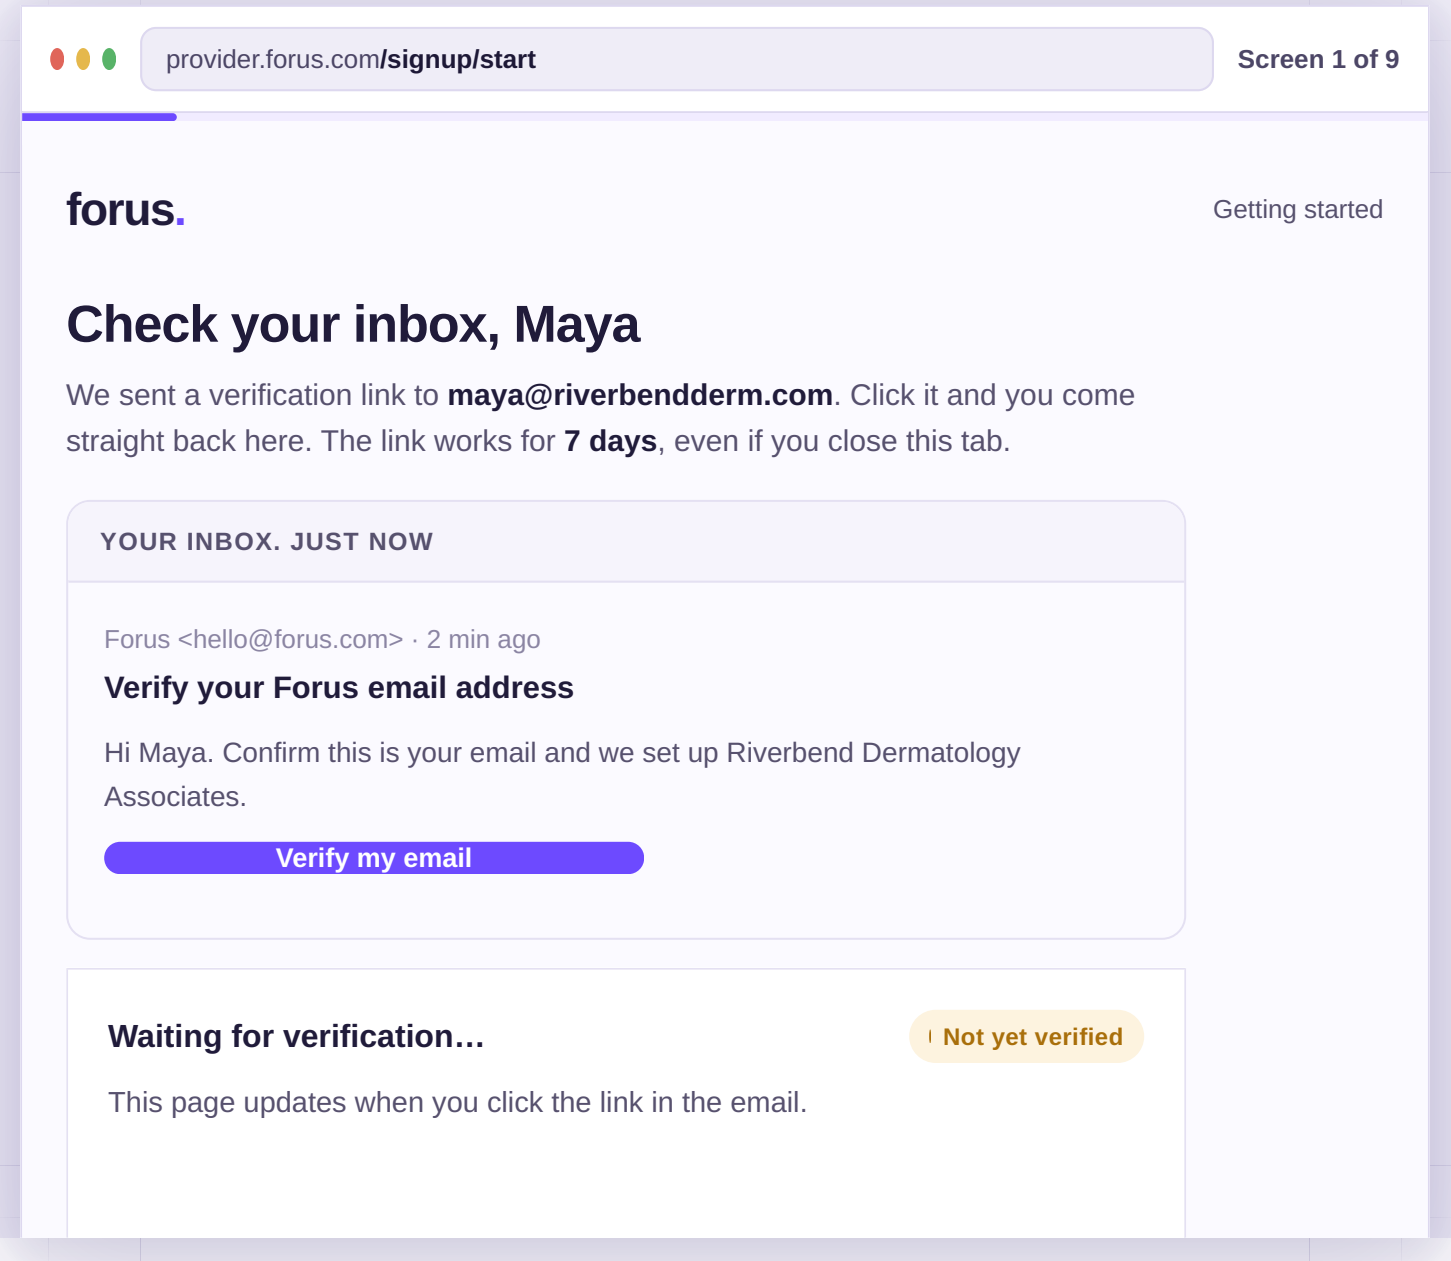

Nine screens, **sign-up to first prescription**. The waitlist, verification, referral, and team invite all happen inside the product. Each screen shows the practice's current state and names one next step.

Didn’t get it? Check spam for “Forus” — some practice inboxes filter first emails.

Resend the email .

Use a different email

OBSERVATION

The verification link routed through a redirect to a login page, so the original tab didn't reflect the change in state.

PROPOSED CHANGE

Update the original tab when the link is clicked, state the 7-day expiry up front, and put resend and change-email recovery on the same screen.

HOW I'D MEASURE IT

Email verification completion rate, and time from sign-up to verified.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

Forus provider onboarding, reimagined

Nine screens, **sign-up to first prescription**. The waitlist, verification, referral, and team invite all happen inside the product. Each screen shows the practice's current state and names one next step.

○ A number or symbol

○ Both passwords match

○ Password managers welcome

Confirm this is you

Maya Chen, MD · Physician

Riverbend Dermatology Associates

Fetched from your sign-up. **Edit if anything is wrong**

Your browser or password manager can make and save this. Most people do.

☐ **Terms of Service & Privacy Notice** — 4 min read · Read

- Forus is free for your practice. No per-script fees. No seat fees.
- You can export your data and leave at any time

☐ **Business Associate Agreement (BAA)** — 3 min read · Read

- Required by HIPAA before we can process any patient data
- Covers how we store, encrypt, and audit access to PHI

Agree and continue

Add a password and check both boxes to continue.

OBSERVATION

Password, Terms, and BAA were presented in a dense step with little explanation of why each agreement is needed.

PROPOSED CHANGE

Ask for a password and the agreements after email verification, with a two-line summary and read time for each, live password checks, and nothing pre-checked. Whether the person signing has authority to sign an organization-level BAA is a separate check from creating the account.

HOW I'D MEASURE IT

Completion rate for this step, and drop-off between email verification and account creation.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

Forus provider onboarding, reimagined

provider.forus.com**/signup/start**

Screen 1 of 9

forus.

Getting started

Your state: Account created · Provider setup

Verification starts the moment you finish this screen.

Set up your provider

Search by provider or practice name to fill in your details automatically.

Look up my practice | I know my NPI

Search by practice or provider name

Riverbend Dermatology

Search NPPES

Results come from the public NPPES registry. Select your organization and the fields below will fill in. See what happens when there is no match

3 results for “Riverbend Dermatology”

Source: NPPES · Updated Nov 2, 2026

Practice details Filled in from NPPES when you pick a result

Legal practice name

Organization NPI (Type 2)

Practice address

Specialty (taxonomy)

Office phone

(212) 555-0147

Fax (optional. Payers still ask.)

You can edit any field. If a value doesn't match the registry, we'll flag it here. You can add more providers and offices later.

This lookup fills **organization details (Type 2 NPI)**. Individual prescriber identity (Type 1 NPI) and your authorization to act for the practice are checked separately — a registry match alone does not confirm authority.

Save provider & start verification

OBSERVATION

I had to leave Forus to find an NPI — fetch, don't ask applies here, since NPPES is public. The live field also didn't distinguish an organization from an individual prescriber.

PROPOSED CHANGE

Add an inline NPPES lookup with prefill and a manual fallback for no matches. The lookup fills organization details (Type 2); individual prescriber identity (Type 1) and authorization to act for the practice remain separate checks — a registry match alone does not prove authority.

HOW I'D MEASURE IT

Provider setup completion and time spent on this step.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

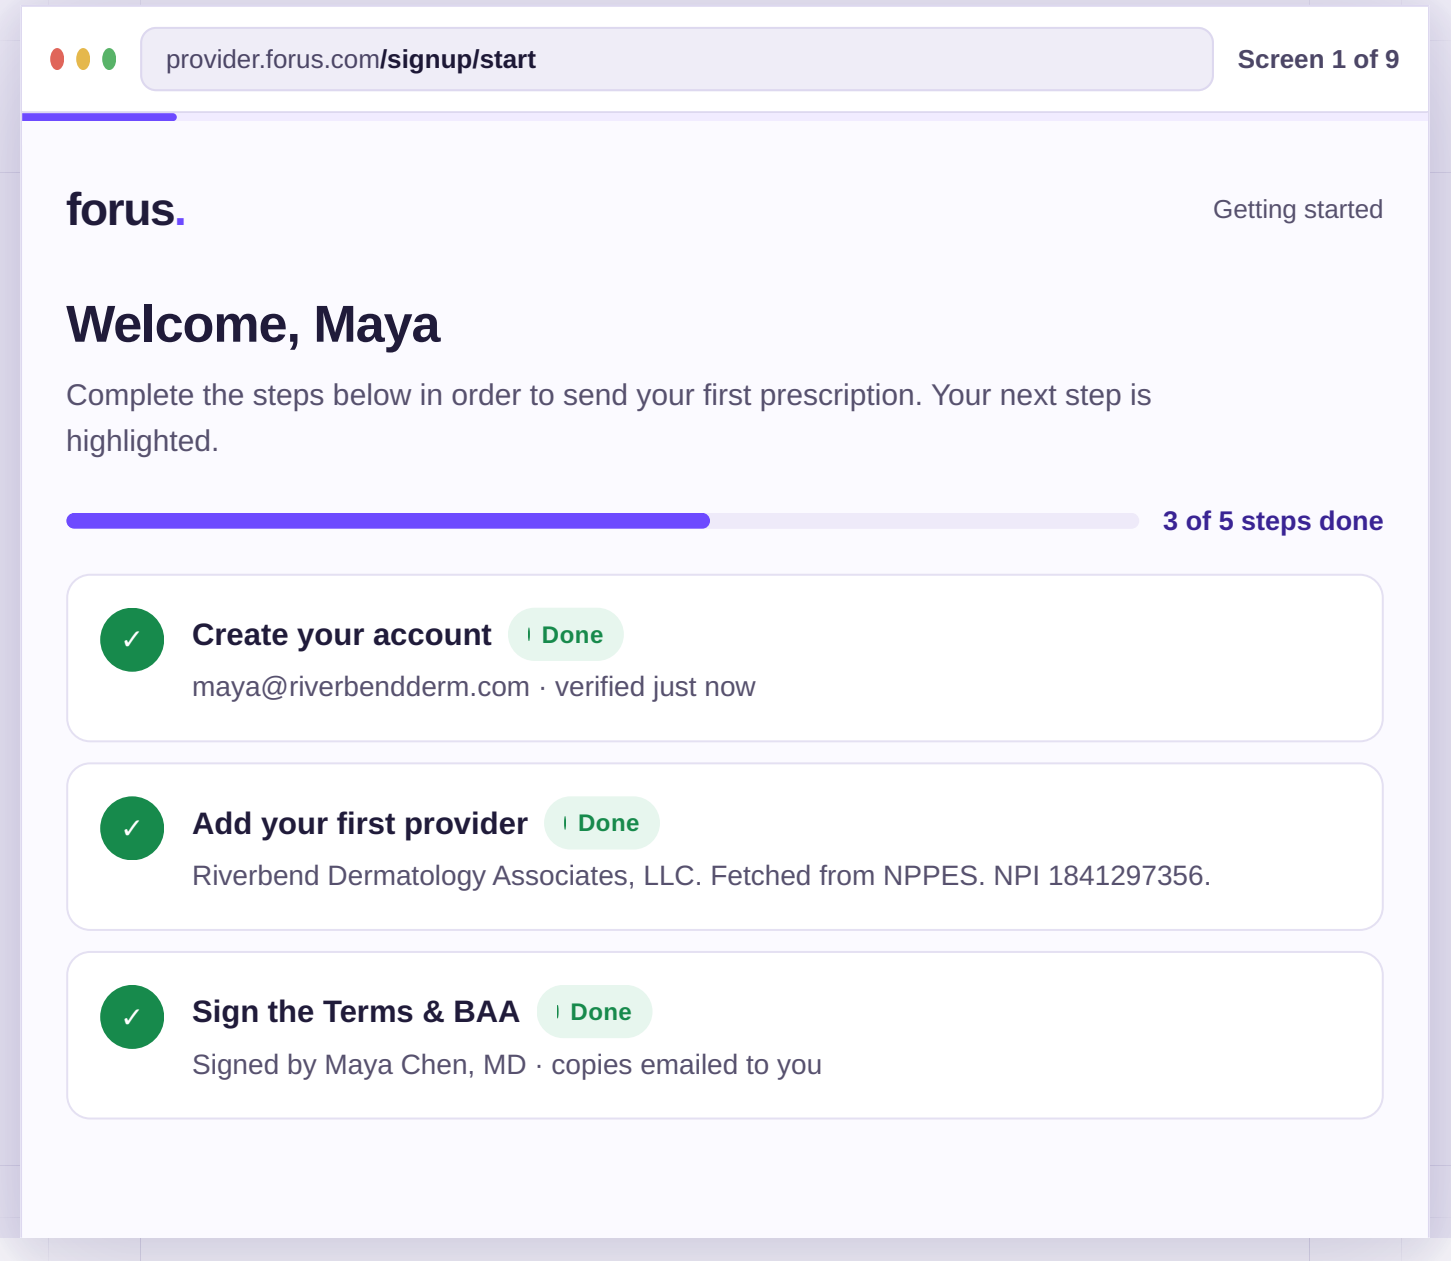

Forus provider onboarding, reimagined

Nine screens, **sign-up to first prescription**. The waitlist, verification, referral, and team invite all happen inside the product. Each screen shows the practice's current state and names one next step.

→ Try the branches: pick **Ophthalmology** on screen 1. Search a name that **is not in NPPES** on screen 4

4 **Complete verification** In progress. 2 of 3 checks done

We're checking your credentials now (illustrative timing: ~4 hours left). You can queue your first prescription below — we'll send it when verification clears.

See verification status | What's being checked?

5 **Send your first prescription** Up next

Who does this: the prescriber, or the PA specialist who prepares prescriptions — not necessarily the person who created this account. Send from EZDerm as usual. We'll hold it until verification clears, then run the PA. This starts the activation count: 1 script per week for at least 3 weeks.

Queue a prescription now

Example: a completed first prescription

Illustrative example of what a completed first prescription looks like:

Dupilumab (Dupixent) 300 mg · Patient: J. Alvarez · Sent from EZDerm → Benefits checked in 4 min → PA sent with evidence attached → **Approved in 3 hrs 12 min** · Pharmacy routed. $0 copay card applied. Handled in Forus without extra forms for your team in this example.

After your first prescription

Invite teammates — starting with whoever runs PAs day to day — add office addresses, set notifications, and add more providers. These are available from your dashboard and Settings.

OBSERVATION

Once inside, onboarding is a menu, not a path: six setup cards with no order and no progress. The prescriber who signs up may also not be the person who runs PAs day to day.

PROPOSED CHANGE

Replace the menu with a single checklist in order, ending at the first prescription, with one highlighted next step. Label the role where it matters — sending the first prescription is the prescriber or PA specialist, not necessarily the account owner.

HOW I'D MEASURE IT

Time to first prescription, and repeat use: 1 script per week for at least 3 weeks.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

Screen 1 of 9

forus.

Getting started

Your state: Verification in progress

Started today at 11:38 AM ET. We email and text you the moment it clears. No need to check back.

We’re verifying Riverbend Dermatology

Your credentials are being checked now. Most practices clear in under 6 hours. Our promise: within **1 business day**. We email and text you the moment it clears, so you don’t need to keep this page open.

ILLUSTRATIVE TIMING

2 of 3	~4 hrs	1 day
checks complete	estimated time left	our promise. Most practices clear in under 6 hours.

66%

✓ **NPI & taxonomy match** Done · 11:41 AM

Organization NPI 1841297356 matched Riverbend Dermatology Associates, LLC in NPPES. Taxonomy 207N00000X (Dermatology) confirmed. Same record you selected at setup.

✓ **Practice address & TIN** Done · 12:03 PM

214 W 86th St, New York, NY 10024 matches the registry and your W-9 details. No documents needed from you.

3 **Prescriber credentials & exclusion check** In progress · started 12:10 PM

State license, DEA registration, and federal exclusion lists for Maya Chen, MD. This check depends on state databases and typically takes the longest.

What to do now

You can queue your first prescription while we finish verification. We'll notify you if anything else is needed.

1 **Queue your first prescription**

Open **EZDerm**, select the patient and medication, and send as usual. We'll hold it and run the prior authorization when verification clears.

Queue a prescription

2 **No further action needed** We'll notify you

We'll email and text you when verification clears. If we need anything from you, it will appear here as a task with specific instructions — for example: *“The fax number on file does not match your NPPES record. Confirm it or fix it.”*

OBSERVATION

After setup, the live copy said 'We're configuring your account' with no timeline, no list of checks, and no way to tell if anything was needed. Verification is an opaque gate — I don't have funnel data to rank it against other drop-off points.

PROPOSED CHANGE

Show each check, its state, and what (if anything) is needed from the practice. Practices can queue a first prescription while verification runs. Timing on this screen is labeled illustrative until Forus has data to support an estimate.

HOW I'D MEASURE IT

Verification completion, elapsed time, and conversion to first prescription.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

Forus provider onboarding, reimagined

Nine screens, **sign-up to first prescription**. The waitlist, verification, referral, and team invite all happen inside the product. Each screen shows the practice's current state and names one next step.

Refer a practice

Send a referral from inside Forus, pre-filled with your details. You'll see each referred practice's status here: **invited, signed up, activated**.

Refer a practice

From

Maya Chen, MD — Riverbend Dermatology Associates

Pre-filled from your account. The referred practice will see your name.

Practice you're referring

Hudson Dermatology Group

Matched to **Hudson Dermatology Group, PC** in NPPES. NPI 1578562094, Poughkeepsie, NY. Fetched from NPPES

Their specialty

Dermatology

Pre-filled with your specialty. This determines their onboarding path.

Their email

office@hudsonderm.example

Send referral

They'll receive one email from Forus naming you as the referrer.

What Hudson Dermatology gets

- **An invite naming you.** One email from Forus, with you listed as the referrer.
- **A free account.** No fees for providers or patients.
- **Standard verification.** Same checks and timeline as any practice. A referral does not change verification speed.
- **Specialty templates.** PA evidence templates for dermatology, loaded at setup.
- **Onboarding support.** Help from our team during setup.

You can track every referral here until they activate: invited, signed up, activated.

312 **dermatology practices are already on Forus.** 41 of them in New York. Most joined because a peer told them it worked.

How referral status works

Each referral is credited to your account when you send it. You'll see its status update here — **invited, signed up, activated** — and nothing else changes: referrals do not change how fast a practice is verified or how quickly it receives service.

Your referrals

Credited to your account when you send them. Status updates appear here.

Westside Skin & Laser
New York, NY · Referred Nov 4
Signed up. Verifying

Beacon Dermatology Partners
Beacon, NY · Referred Oct 21 · First script sent Oct 28
Activated

OBSERVATION

'Refer a practice' left Forus for an external form, with no status back to the referrer.

PROPOSED CHANGE

Bring referral into the product right after the first PA, prefilled and attributed to the referrer. Show invited / signed up / activated status only, with no reward tied to verification or service speed.

HOW I'D MEASURE IT

Qualified referrals sent, and referred-practice activation rate.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

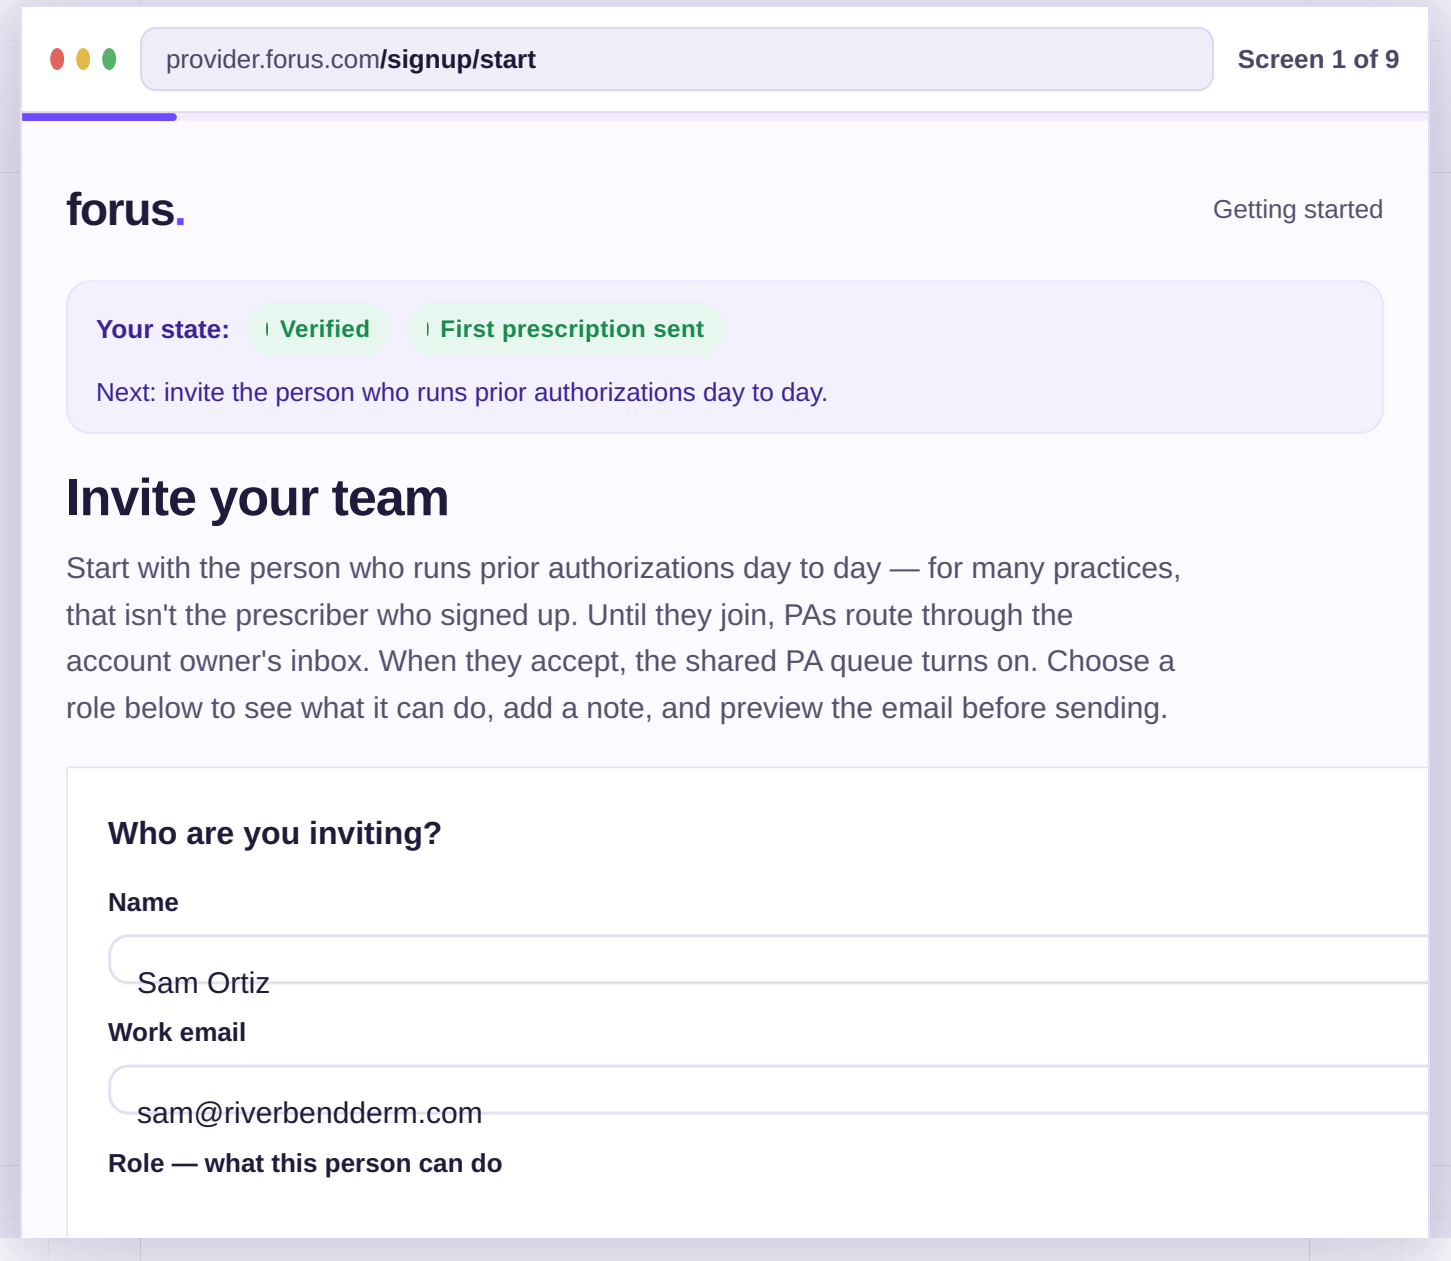

Forus provider onboarding, reimagined

Nine screens, **sign-up to first prescription**. The waitlist, verification, referral, and team invite all happen inside the product. Each screen shows the practice's current state and names one next step.

Prescriber

Can send and sign prescriptions and approve PAs. For physicians, NPs, and PAs.

PA Specialist / Delegate — runs PAs day to day

Prepares and submits PAs, uploads evidence, and messages payers. Cannot sign prescriptions.

Office Admin

Manages teammates, office details, and notification settings. Sees practice-level reports, not patient details.

View-only

Can check statuses and reports. Cannot change or submit anything.

Check the role description before sending — it controls access to patient information.

Add a note

Hi Sam. I set us up on Forus so our Dupixent and Skyrizi PAs stop living on the fax machine. Your queue is already set up. Joining takes about two minutes. Maya

Send invite to Sam

Inviting 10+ people? **Upload a CSV instead**.

OBSERVATION

Team invites were buried in Settings on a bare admin form, with roles that weren't explained. The person who runs PAs day to day may not be the person who signed up.

PROPOSED CHANGE

Make invite its own flow, framed around the operator role first. Show each role as a separate selectable row with what it can and can't do, plus a personal note, an email preview, and sent / accepted / pending status.

HOW I'D MEASURE IT

Invite acceptance rate, and the share of activated practices with at least one PA operator invited.

Tip: use ← and → arrow keys to walk the flow.

PROTOTYPE. NOT THE LIVE PRODUCT.

forus.

Getting started

Your state: Waitlisted. Ophthalmology

Email verified. The med list below is the one thing that makes the wait pay off.

This is the waitlisted branch from Screen 1, shown for a second practice:

You’re on the Ophthalmology waitlist, Dr. Park

Ophthalmology isn't live yet. Below is your queue position, what happens next, and a step you can complete now: adding your medication list so it's loaded when your account opens.

Your medication list

Add the medications your practice needs prior authorizations for most. We use this list to prepare your specialty's PA templates. Takes about two minutes.

Add a medication

OBSERVATION

Waitlisted practices got a generic confirmation and were asked by email to send their most-prescribed PA medications as free text. Their email also wasn't verified on this path.

PROPOSED CHANGE

Show queue position and next steps in the product, verify email on this path too, and collect the med list as structured chips in the flow so it's loaded when the account opens.

HOW I'D MEASURE IT

Med-list completion on the waitlist, and first-prescription rate in the first week after a specialty opens.

Tip: use ← and → arrow keys to walk the flow.

#14

Your place in the Ophthalmology queue

Park Eye Associates · james@parkeye.example
Position set when you signed up, Nov 9.

✓ **Today.** You are in the queue. Your email is verified, so the launch note will reach you.

2 **Now.** Gastroenterology cohorts are onboarding. Ophthalmology opens next.

3 **When your spot opens.** You get an email and a text from Taylor on our team. Your account turns on with everything below already loaded.

4 **Day one.** If your med list is saved, it's already loaded when your account opens.

Add

Common for Ophthalmology. Tap to add:

Here's what we'd run for Park Eye Associates

Based on the 5 medications above. The intravitreal injections and specialty drops that drive most ophthalmology PA volume:

~38 PAs / mo

benefits checks + PA submissions, handled for you

~19 hrs / mo

of staff phone-and-fax time back

Day one

evidence templates built for your meds

provider.forus.com**/signup/start** **Screen 1 of 9**

forus. Getting started

The flow is four states, not nine screens

Each screen moves a practice from one state to the next, and shows which state they're in. The live sign-up is one long form with no progress indicator and no visible state.

A **Unknown specialty → waitlisted.** Branch set at sign-up and shown in the product, with queue position and next steps. Screens 1 and 9.

B **Live specialty → verifying.** Email, password, and agreements, then verification status with any outstanding actions visible. Screens 2, 3, 6.

C **Verified → onboarding.** A checklist in order, with provider details fetched from NPPES where possible. Screens 4 and 5.

D **Activated.** First prescription sent. Then referral, asked after the first PA, and team invites. Screens 7 and 8.

Every screen has a job

What each screen is for, and what it affects:

SCREEN	MOVES	JOB
1 · Sign-up	Activation	Branch shown up front, before more information is asked for.
2 · Email check	Activation	Page updates in place; recovery options on the same screen.
3 · Password + BAA	Activation	Password and required agreements, with summaries before the legal text.
4 · NPI lookup	Activation	Fetch, don't ask — NPPES lookup with prefill and a manual fallback.
5 · Guided dashboard	Activation	Checklist in order, ending at the first prescription, with roles noted where they matter.
6 · Verification status	Activation	Checks, outstanding actions, and illustrative timing in one place.
7 · Refer a practice	Network	In-product and prefilled; status tracked as invited / signed up / activated.
8 · Invite teammates	Network	Operator-first invite, plain-language roles, and sent / accepted / pending status.
9 · Waitlisted path	Demand	Queue position shown; med list collected in the flow.
