PROTON LUMO – HEAD OF GROWTH CASE

Lumo Growth Strategy

Fix the Free path, reset paid ads, and pilot one subscriber offer

Carlosluis Duchicela – Oct 2026

RECOMMENDED STRATEGY

Convert more existing demand into paying customers

Fix signup and return paths, test ads around useful tasks, and pilot add-ons for eligible Proton subscribers.

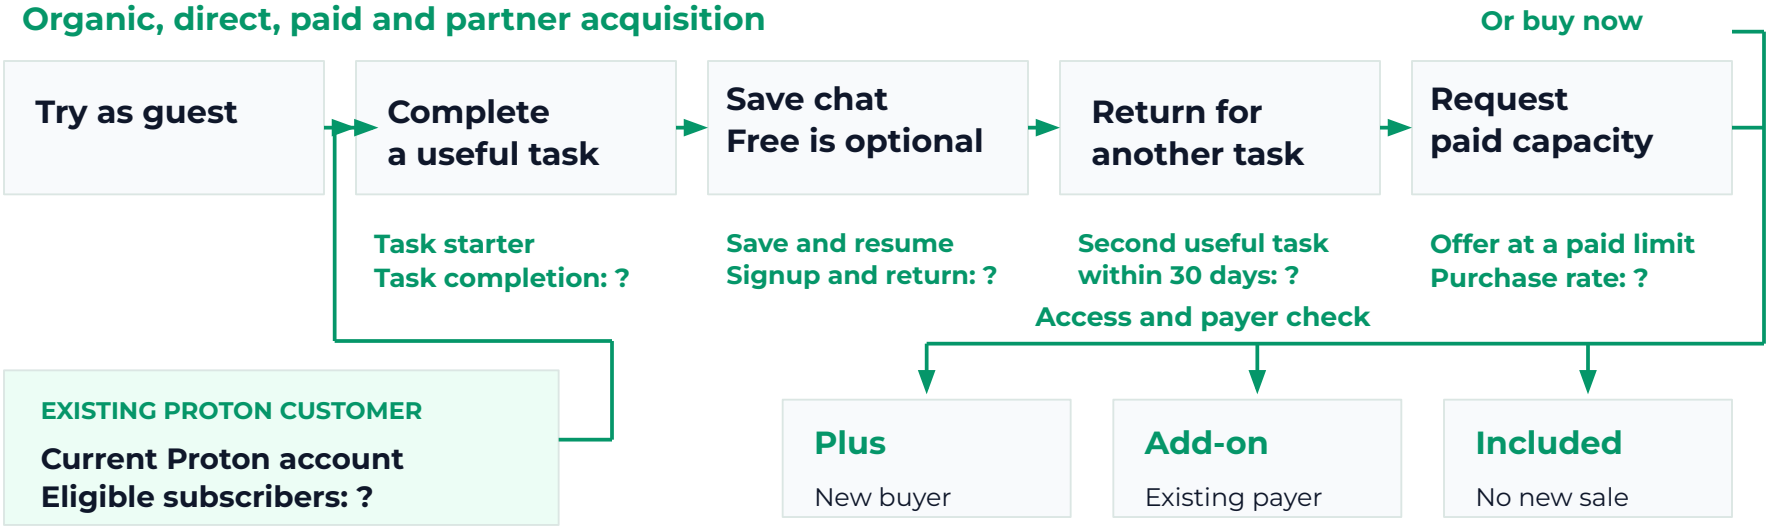

GROWTH PRIORITY	WHY PRIORITIZE IT	FIRST ACTION
Improve paid acquisition returns	Ads: 40% of signups. <5% of two-minute buyers.	Review campaign economics. Test an ad and matching task.
Increase repeat use	45% of trying accounts never return after Day 1.	Fix Free signup and chat resume. Test one relevant task starter.
Grow subscriber revenue	Add-ons: 60% of ARR; the eligible subscriber count is unknown.	Count the subscribers who can be billed. Prepare one Q2 offer.

First scope: Free signup and current-business order correctness. No new B2B platform. Cost the first release and tests before committing further capacity.

GROWTH MODEL

Put each product change on the user's actual journey

The plan tests useful return, demand for paid capacity and eligible subscriber reach.

Extra Plus buyers = new accounts × eligible share × conversion gain.
Extra add-on buyers = subscriptions reached that can add Lumo × purchase-rate gain.

COMMERCIAL SCENARIOS

~$323K year-end ARR; ~$99K earned during Year 1

ARR = December recurring revenue × 12. Later buyers contribute fewer months to Year 1 revenue.

CASE	CONVERSION LIFT / ELIGIBLE SUBSCRIBERS	YEAR-END ARR	YEAR 1 REVENUE
Conservative	Plus +0.375pp Add-on: 100K × +0.5pp	~$162K	~$50K
Base	Plus +0.75pp Add-on: 100K × +1pp	~$323K	~$99K
Upside	Plus +1.5pp Add-on: 250K × +1pp	~$696K	~$211K

Base year-end ARR: ~$224K Plus + ~$99K add-on

Assume purchases one month after exposure, with half a month of revenue at first.
People reached in December buy in Year 2. These are revenue estimates before costs.

PAID ACQUISITION

Buy ads around one real task; scale only what pays back

Test search and a newsletter around one task: drafting a client update from notes.

PRIORITY	WHAT WE TEST	WHY IT COULD WORK
Campaign review	Track purchases after 30 and 60 days. Compare revenue with ads and service costs.	Keep campaigns that pay back. Fix or stop the rest.
Capture search intent	Ad: “Draft a client update from notes”. Open that task, ready for their notes.	Users try the work they came for before pricing.
Create demand	Show a consultant turning notes into a client update in one newsletter.	Reach people who send regular client updates.

20K ad signups yield <38 immediate buyers per month. Later purchases remain unknown. Expand campaigns when added revenue covers ad and serving costs.

FIRST-YEAR PLAN

Ship the Free fix in Q1; the subscriber pilot lands in Q2

Help users finish, save and repeat useful work. Then send more suitable paid and Proton traffic through it.

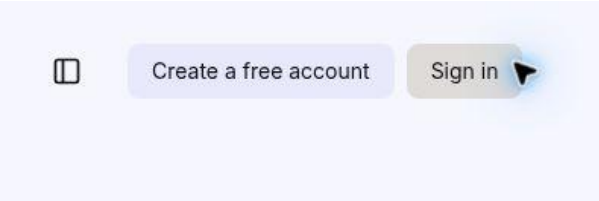

QTR	CHANGE WE SHIP	USER CHANGE	MODELED OUTPUT
Q1	Free signup saves the selected chat. Test client-update help + search ad.	More users save work and return.	~26 Plus / 0 add-on ~$3K ending ARR
Q2	Offer Lumo to Drive subscribers. Test newsletter and Project trial.	More users try Plus. More add-on purchases.	~394 Plus / 100 add-on ~$62K ending ARR
Q3	Expand product and ad winners. Test shared answers and templates.	More suitable users complete useful work.	~722 Plus / 300 add-on ~$182K ending ARR
Q4	Help buyers use paid features. Reduce serving and billing failures.	Paid customers stay as new buyers join.	~788 Plus / 450 add-on ~$323K ending ARR

At full rollout, the assumed conversion gain adds ~263 Plus buyers per month.
Earlier paying cohorts stay subscribed as new buyers join, building recurring revenue.

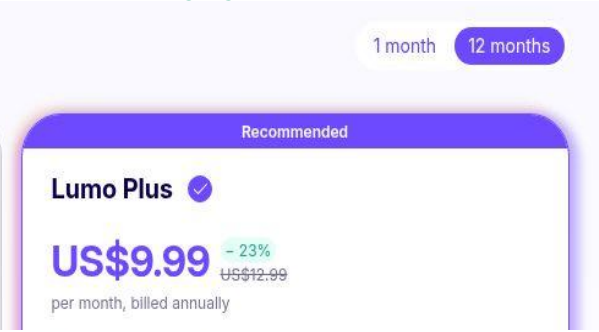

Free signup becomes an unexpected purchase decision

45% of daily users are guests. Saving their work should lead to Free account creation and back to the same chat.

WHAT THE USER CLICKED

WHERE THE CLICK LANDED

1 Free intent meets a paid checkout

Create Free opens Free account creation.
Return users to the chat they chose.

2 Save does not explain what users keep

Offer “Save this chat” after a useful result.
State what persists and for how long.

3 Business order makes access hard to interpret

Name the selected plan and Lumo access.
Show the full charge and renewal.

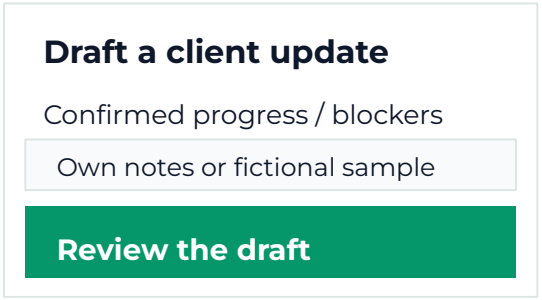

THREE PRODUCT EXPERIMENTS

Test task suggestions, saved chats and a trial at a real limit

Help users get a useful result, return to the same work and try extra capacity when they need it.

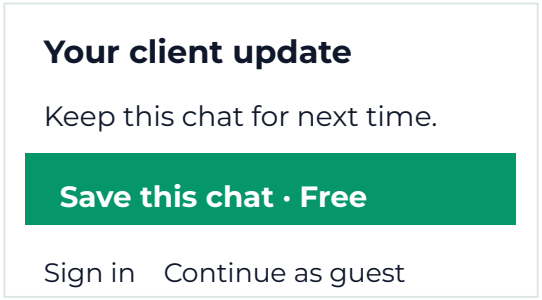

45% of accounts that try Lumo never return after signup day.

1 FIND A USEFUL FIRST TASK

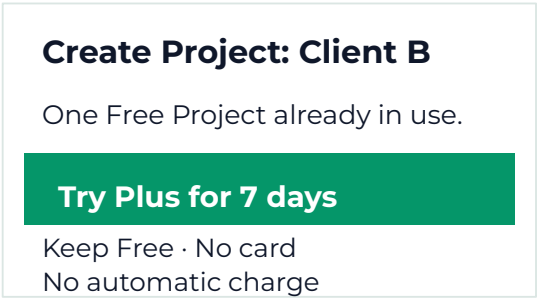

Second useful task within 30 days

2 KEEP WORK FOR NEXT TIME

More guests save their chat and return to use it.

3 TRY NEEDED PLUS CAPACITY

60-day revenue less costs per account assigned to test

75 extra Plus buyers per 10K eligible accounts → ~$224K year-end ARR.
Test all three changes against fixed Free signup.

EXISTING PROTON SUBSCRIBERS

Sell Lumo as an add-on to existing Proton customers

Add-ons generate 60% of Lumo ARR. Test an offer in Drive for people working on a client update.

Test with paying customers who can add Lumo:

"Lumo already included? Open it free." Those customers are outside this sales test.

WHEN	WHAT THE CUSTOMER SEES
1 While using Drive	"Draft a client update with Lumo." Show this suggestion beside relevant notes.
2 After choosing to try Lumo	Choose which notes to use and review the result. Keep the chat for the next client update.
3 At a paid limit	Keep the Proton plan. Offer Lumo at its current price. Show amount due, billing period and renewal.

Pilot in one existing product in month 4, with a comparison group. Stop if it hurts the main product, reaches too few people, or doesn't pay back.

TWO ORGANIC MECHANISMS

Test sharing as a source of new, returning users

Two routes: adapt an answer or reuse a template with your own notes.

A SHARE AN ANSWER

Reviewed supplier comparison
Selected facts, without the source chat

↓

“Adapt this comparison”
Recipient adds their own criteria and compares their suppliers.

↓

Returns for another task within 30 days.
May share a new comparison.

B SHARE A TEMPLATE

Client-update template
Progress, blockers, dates and open questions

↓

“Use this template”
Recipient supplies their own notes and creates a client update.

↓

Returns with new facts within 30 days.
May share an improved template.

18 users who stay per 1,000 eligible users in a 90-day pilot (assumed rates) — near-free acquisition, not a loop: 0.018 new sharers per sharer vs the 1.0 a loop needs. No revenue booked.

EXECUTION AND ACCOUNTABILITY

The first month has owners and exit criteria

Product owns repeat use, Marketing owns ad returns, and Commerce with Drive owns the subscriber offer.

RISK AND OWNER	WHAT WOULD CHANGE THE PLAN	RESPONSE
Users do not return **Product**	A useful first result still fails to bring users back.	Change the task or experience before buying more traffic.
Ads do not pay back **Marketing**	Mature customer value fails to cover ad and serving costs.	Fix the ad or destination. Stop proven losing campaigns.
Too few suitable subscribers **Commerce and Drive**	Too few subscribers can buy. Drive retention worsens.	Reduce or stop the offer. Test a different customer task.

Proposed team: 1 PM, 2 engineers and 0.5 designer, with shared Marketing and Commerce.

First 30 days: Free signup fixed, task/search tests live, subscriber pilot sized and costed.
